IBD Registry wins Commuqué award for COVID-19 tool

The IBD Registry has won a coveted Commuqué award in recognition of its collaborative efforts in creating the COVID-19 IBD Risk Tool for people with inflammatory bowel disease (IBD).

The entry was supported by agency partner Dovetail and judged alongside many high-profile candidates in the new Agility and Flexibility category, brought in this year to recognise healthcare communications responses to the COVID-19 pandemic.

The COVID-19 IBD Risk Tool was created in just eight days, thanks to the Registry's data governance infrastructure and strong capability. The organisation worked closely with partners at the British Society of Gastroenterology and Crohn's and Colitis UK, with vital support from sponsors including Amgen, Galapagos, Gilead and Tillotts UK.

The patient-friendly self-assessment risk tool aimed to reassure patients with IBD and support hospital IBD teams at the start of the COVID-19 shielding programme.

The judges said they were "impressed with the rapid and robust strategic response and how Dovetail and IBD Registry's collaborative nature showed a huge degree of flexibility".

Chief Executive Liz Dobson said: "*We're delighted to win this prestigious award. We set out to solve a data problem. What we achieved was a way of giving patients knowledge that empowers them to understand and manage their own disease, in only eight days from concept to launch. Our tool also shows clinicians the benefit of linking patient-entered and clinical data together, giving clinical teams a 360-degree view of each patient.*"

The Commuqué awards ceremony was held the Grosvenor House hotel in London on 1st September.

About the IBD Registry

The purpose of the IBD Registry is to improve the health of people living with inflammatory bowel disease in the UK by the collection and analysis of data to increase understanding of the care of people with IBD and their treatments and to facilitate research. We do this by collecting and analysing data from IBD patients nationally. Working with over 175 hospitals in the UK and with over 80,000 patient-level records, we are one of the largest IBD registries in Europe
